

Master Plan Overview

In response to continued growth of both the airport and the community, the Department of Airports has updated the airport master plan and the Federal Aviation Regulations Part 150 Airport Noise Compatibility Study.

The airport master plan is an essential element in the Department of Airport's strategic planning process. Based on a detailed analysis of existing conditions and future forecasts, the master plan outlines the basic business strategy and framework for future development of the Airport. The major objective of the master plan is to identify the airfield, landside and terminal facility improvements that are required within the next twenty years.
